DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-27, drawn to nucleic acids, classified in class 536, subclass 22.1.
 - II. Claims 28-53, and 55-56, drawn to nucleic acid hybridization method, classified in class 435, subclass 6.
 - III. Claims 54 and 58, drawn to method of treatment of a disease, classified in class 424, subclass 88.
 - IV. Claims 57 and 59, drawn to computer algorithm, classified in class 700, subclass 90.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the nucleic acids of Group I can be used in the nucleic acid hybridization method of Group II or can be used to make RNA and protein or can be used to make antisense nucleic acid for gene therapy.

Art Unit: 1634

3. Inventions of Groups I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the nucleic acids of Group I can be used in the method of treatment of a disease of Group III or can be used to make RNA and protein or can be used in the nucleic acid hybridization to detect a nucleic acid.

4. Inventions of Groups I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of nucleic acids of Group I is not disclosed as capable of use together with the computer algorithm of Group IV and they have different modes of operation, different functions, or different effects.

5. Inventions of Groups II and III-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of nucleic acid hybridization method of Group II is not disclosed as capable of use together with method of treatment of a disease of Group III and computer algorithm of Group IV and they have different modes of operation, different functions, or different effects.

Art Unit: 1634

6. Inventions of Groups III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of method of treatment of a disease of Group III is not disclosed as capable of use together with the computer algorithm of Group IV and they have different modes of operation, different functions, or different effects.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

8. A telephone call was made to Astrid Spain on September 18, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CAR 1.143).
